IMPORTANT DATES:

Call for Sessions: September 2013

Deadline for Special Sessions: December 2013

Call for Papers: April 2014

Deadline for Abstracts: December 2014

We invite you to join us in Bordeaux for the 7th International Conference on Life Cycle Management

LCM – LIFE CYCLE MANAGEMENT

To make life cycle thinking and product sustainability operational for businesses a new logic for governance is required. The organization must “go beyond its facility boundaries” and be willing to expand its scope of collaboration and communication to all stakeholders in its value chain.

This implies understanding the use of land and water, and the flow of material and energy across the life cycle, to develop and implement concepts and tools incorporating environmental, economic, and social aspects of products across their life cycle and management approach open at collecting, structuring and disseminating product-related information from the various programs.

Science, business and policy makers have all a role to play in the transition towards sustainable consumption and production.

ABOUT THE CONFERENCE

The Life Cycle Management conferences are established as one of the leading conference series worldwide in the field of environmental, economical and social sustainability. The unique feature of LCM is developing practical solutions for the implementation of life cycle approaches into strategic and operational decision-making. LCM is for international decision-makers from science, industry, NGOs and public bodies.

SPECIAL SESSIONS

We invite proposals of special sessions on relevant trends and developments in Life Cycle Management.

SPONSORSHIP OPPORTUNITIES

We invite your organization to sponsor LCM 2015. The conference will provide you with an exceptional level of international exposure and enhance your visibility.

EXHIBITION

Book early to present your technology services and equipment to international scientists and decision-makers from industry and public bodies.

THEMES

TOPICS :

- Role of chemicals and materials in enhancing the sustainability of product systems
- Application of LCA for eco-design and sustainable manufacturing
- Regional approaches for integrating Life Cycle Thinking
- Mainstreaming of sophisticated LC approaches towards applications and tools
- Managing uncertainty in decision making
- Additional key topics and the overall headline to be defined closer to the conference date

BROAD-SPECTRUM TOPICS :

- Focus on the application side of LCM for “mainstreaming”
- Links to range of sustainability tools like eco-design, labelling and green purchasing.
- Coverage of significant sectors like manufacturing, agri-food, etc.
